Department of Mechanical Engineering

M.Tech. Materials and Manufacturing Technology Curriculum and Syllabus

(Applicable to the students admitted during AY: 2022-23)

School of Engineering and Sciences SRM University *AP*, Andhra Pradesh

Department Vision

To become distinct and renowned globally by graduating high-quality professionals through rigorous coursework and cutting-edge research.

Department Mission

- 1. Emerge as a world-class mechanical engineering department in exploring and providing knowledge through highquality academic programs and experiential learning.
- 2. Create an ambience for impactful research aligning with the national mission and addressing societal needs.
- 3. Create entrepreneurs and leaders of the future imparted with knowledge, global awareness, and strategic thinking.
- 4. Promote high standards of integrity, and ethical behaviour among faculty members, staff, and students.

Program Educational Objectives (PEO)

- 1. Prepare graduates with a strong foundation in the fundamentals of advanced materials and manufacturing technologies, with a focus on new product and process development for various industrial applications.
- 2. Develop graduates who can conduct independent research and development (R&D) in materials and manufacturing technology, with a strong understanding and ability to design and implement sustainable and environmentally responsible solutions using data interpretation, design, experimentation, and analysis.
- **3.** Prepare graduates for leadership roles in industry, academia, or government, with the ability to manage projects, teams, and resources effectively and encourage a sense of entrepreneurship

Mission of the Department to Program Educational Objectives (PEO) Mapping

| | PEO 1 | PEO 2 | PEO 3 |
|---------------------|-------|-------|-------|
| Mission Statement 1 | 3 | 2 | 3 |
| Mission Statement 2 | 3 | 3 | 3 |
| Mission Statement 3 | 2 | 3 | 3 |
| Mission Statement 4 | 3 | 2 | 2 |

Program Specific Outcomes (PSO)

- 1. Apply advanced materials science and manufacturing principles to design, develop, and characterize novel materials and processes with tailored properties for specific applications and realize the dream of India to establish a world-class leader in manufacturing.
- 2. Employ advanced manufacturing techniques to fabricate high-performance materials and components with desired microstructures and functionalities. Utilize computational tools to simulate materials' behaviour, predict performance, and optimize manufacturing processes.
- **3.** Conduct R&D to explore novel materials and manufacturing processes for advancing the field. Communicate technical findings through presentations, publications, and reports for diverse audiences. Collaborate with multidisciplinary teams to address complex challenges and contribute to innovative solutions.

Mapping Program Educational Objectives (PEO) to Program Learning Outcomes (PLO)

| | Program Learning Outcomes (PLO) | | | | | | | | | | | | |
|-------|---------------------------------|---------------------------------------|---|-------------------------------|-----------------------------|-----------------------------------|--------|-----------------------------------|-------------------------|-------------------|-------|-------|-------|
| | POs | | | | | | | | | | PSOs | | |
| PEOs | Engineering Knowledge | Design Development of Solutions | Conduct Investigations of Complex Problems | Modern Tools and ICT Usage | The Engineer and Society | Environment and Sustainability | Ethics | Individual and Teamwork Skills | Communication Skills | Lifelong Learning | PSO 1 | PSO 2 | PSO 3 |

Note: L-T/D-P/Pr and the class allocation is as follows.

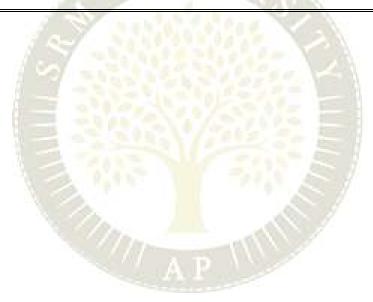

- a) Learning Hours : 30 learning hours are equal to 1 credit.
- b) Lecture/Tutorial : 15 contact hours (60 minutes each) per semester are equal to 1 credit.
- c) Discussion : 30 contact hours (60 minutes each) per semester are equal to 1 credit.
- d) Practical : 30 contact hours (60 minutes each) per semester are equal to 1 credit.
- e) Project : 30 project hours (60 minutes each) per semester are equal to 1 credit.

Course Objectives / Course Learning Rationales (CLRs)

- 1. Understand the Structure of a Research Paper
- 2. Familiarize students with the different types of research & methodologies.
- 3. Develop fundamental proofreading skills to identify and correct common grammatical errors.
- 4. Guide students in creating clear thesis statements and research questions to shape their papers.

Course Outcomes / Course Learning Outcomes (CLOs)

| | At the end of the course the learner will be able to | Bloom's Level | Expected Proficiency Percentage | Expected Attainment Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Identify and recall the key components of a research paper, including abstracts, introductions, methods, results, discussions, and conclusions. | 1,2 | 75% | 75% |
| Outcome 2 | Interpret the structure and organization of research papers, recognizing the role each section plays in conveying information. | 2 | 75% | 75% |
| Outcome 3 | Analyze the effectiveness of thesis statements and research questions in guiding the development of a research paper. | 3 | 75% | 75% |
| Outcome 4 | Generate clear and concise sentences, paragraphs, and sections that conform to academic writing standards. | 3 | 75% | 75% |

Course Objectives / Course Learning Rationales (CLRs)

- 1. To learn the sample preparation methods and sample handling.
- 2. To introduce the materials characterization tools and techniques.
- 3. To introduce instrumentation aspects of sophisticated characterization equipment.
- 4. To provide hands-on experience with the characterization techniques

Course Outcomes / Course Learning Outcomes (CLOs)

| | At the end of the course the learner will be able to | Bloom's Level | Expected Proficiency Percentage | Expected Attainment Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Describe principles and methods of sample preparation and characterization. | 2 | 80% | 75% |
| Outcome 2 | Describe the microscopic and spectroscopy method of materials characterization | 3 | 80% | 70% |
| Outcome 3 | Determine the crystal structure, phase, morphology, Chemistry, and properties of materials. | 3 | 70% | 65% |
| Outcome 4 | Design and conduct experiments, gather data, analyze and interpret results. | 3 | 80% | 70% |

Course Unitization Plan (Laboratory)

| Expt. No. | Syllabus Topics | Required Contact Hours | CLOs Addressed | References Used |
|--------------|--|------------------------------|-------------------|--------------------|
| 1 | Optical microscopy and image analysis- Sample preparation, Qualitative and quantitative measurement of Ferrous and Non-Ferrous Materials (a) micro-etching techniques for ferrous and non-ferrous alloys, dark/bright field imaging, differential interference contrast technique, phase contrast technique. (a) Quantitative analysis Grain size analysis, Graphite flake size determination, Phase fraction, Nodularity and Pore size analysis c) To determine the hardness of the given Specimen using Vicker"s hardness test. | 8 | 1-4 | 1 |
| 2 | X-ray Diffraction- Phase analysis of ferrous and non-ferrous materials, crystallite size calculation, residual stress calculation | 3 | 1-4 | 2 |
| 3 | Differential Scanning Calorimetry (DSC) (a) Determining glass transition temperature of polymeric materials (b) sample preparation, determination of thermodynamic parameters, measurements on precipitation-hardened Al alloys | 3 | 1-4 | 4 |
| 4 | Measurement of Coefficient of Thermal Expansion | 2 | 1-4 | 4 |
| 4 | Scanning electron microscopy: sample preparation techniques, secondary electron and backscattered electron imaging, point, line, and area mapping, X-ray mapping | 4 | 1-4 | 1 |
| 5 | Study micrographs of differently heat-treated materials and compare them | 4 | 1-4 | 1 |
| 6 | Transmission electron microscopy: sample preparation, bright/dark field imaging, Selected area diffraction and indexing | 3 | 1-4 | 3 |
| 7 | The spectroscopic method for the analysis of a sample | 3 | 1-4 | 1 |

- 1. To understand the basic principle and terminology of rapid prototyping
- 2. Understand the various techniques of the additive manufacturing.
- 3. Understand the optimum part deposition technique in 3D printing.
- 4. To understand the application of additive manufacturing in rapid tooling and reverse engineering

Course Outcomes / Course Learning Outcomes (CLOs)

| | At the end of the course the learner will be able to | Bloom's Level | Expected Proficiency Percentage | Expected Attainment Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Define the concept of additive manufacturing and file formats required by additive manufacturing. | 1 | 80% | 75% |
| Outcome 2 | Understand the unique capabilities and various techniques of Additive Manufacturing. | 2 | 70% | 75% |
| Outcome 3 | Develop and slice CAD model for printing with any kind of Additive Manufacturing technique. | 3 | 80% | 70% |
| Outcome 4 | Apply the additive manufacturing in the application of rapid tooling and reverse engineering. | 2 | 80% | 75% |
