# **Department of Computer Science Engineering**

M.Tech. Data Science Curriculum and Syllabus (Applicable to the students admitted from AY: 2023 onwards)

School of Engineering and Sciences SRM University *AP*, Andhra Pradesh

### **Department Vision**

To create technology innovators and leaders who can shape the future of society through technical, research, and entrepreneurial skills with a strong emphasis on interdisciplinary learning and collaborations.

### **Department Mission**

- 1. Use effective teaching and learning pedagogies to enhance technical competency with a focus on computer science and engineering fundamentals.
- 2. Encourage interdisciplinary education and research by promoting the exchange of ideas among a varied community of researchers, educators, and learners.
- 3. Develop a substantial body of knowledge for industrial applications.
- 4. Create an outstanding interdisciplinary research atmosphere.
- 5. Instil students with effective managerial skills, fostering their development into competitive and visionary entrepreneurs.

### **Program Educational Objectives (PEO)**

- 1. To produce the most employable graduates who are problem solvers, team players and lifelong learners with exceptional analytical & effective communication skills, leadership abilities and ethical values with significant opportunities in various domains and sectors both nationally and internationally.
- 2. To develop proficiency in advanced data analysis, mathematics, and statistical inference of the data to create solutions for various problems in the data analytical industry for a better society.
- 3. To emerge as strong data science researchers using world-class research facilities focusing on interdisciplinary and multidisciplinary research and learning.

|                     | PEO 1 | PEO 2 | PEO 3 |
|---------------------|-------|-------|-------|
| Mission Statement 1 | 3     | 1     | 2     |
| Mission Statement 2 | 3     | 3     | 2     |

| Mission Statement 5 | 2     | 3     | 2     |

### Mission of the Department to Program Educational Objectives (PEO) Mapping

### Program Specific Outcomes (PSO)

- 1. Develop efficient and effective mathematical and statistical models and applications in the field of Data Science.
- 2. Design and develop advanced techniques and algorithms in Data Sciences to analyze data and solve real-world problems.
- **3.** Conduct exceptional research in the emerging areas of Data Science to develop solutions and acquire skills in the field of data mining, prediction of data based on the AI, Computer Networks, Signal & Image Processing.

### Mapping Program Educational Objectives (PEO) to Program Learning Outcomes (PLO)

# Note: L-T/D-P/Pr and the class allocation is as follows.

- a) Learning Hours : 30 learning hours are equal to 1 credit.
- b) Lecture/Tutorial : 15 contact hours (60 minutes each) per semester are equal to 1 credit.
- c) Discussion : 30 contact hours (60 minutes each) per semester are equal to 1 credit.
- d) Practical : 30 contact hours (60 minutes each) per semester are equal to 1 credit.
- e) Project : 30 project hours (60 minutes each) per semester are equal to 1 credit.

### Course Objectives / Course Learning Rationales (CLRs)

- 1. Familiarize with the principles of Design Thinking
- 2. Learn to apply the principles of Design Thinking
- 3. Apply Design Thinking to solve problems.

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Grasp the Concepts and process of Design Thinking    | 2                | 85%                                   | 90%                                  |
| Outcome 2 | Learn the process of Design Thinking                 | 2                | 85%                                   | 90%                                  |
| Outcome 3 | Solve a problem using Design Thinking Principles     | 5                | 75%                                   | 65%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. Introduction of mathematical tools that are useful in developing new algorithm for machine learning.
- 2. Introduce the matrix method and optimization process.
- 3. Data analysis using the least squares classification and regression.

#### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to   | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Analyse and analyse the large-scale computational complexity of various matrix factorization.  | 2                | 70%                                   | 75%                                  |
| Outcome 2 | How machine learning builds on numerical linear algebra,<br>Optimization, and statistics.      | 5                | 70%                                   | 75%                                  |
| Outcome 3 | Apply the basic statistics and probability concepts.   | 4                | 70                                    | 75%                                  |
| Outcome 4 | Implementing the numerical methods using MATLAB/Python and analysing the numerical complexity. | 6                | 75%                                   | 80%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. Understand the importance of data science.
- 2. Learn data collection and pre-processing techniques.
- 3. To learn data classification techniques.
- 4. To learn data visualization techniques.
- 5. To learn some tools to work on data science (such as Numpy, Scipy, pandas, Scikit-learn, IPyhotn, Matplotlib, NetworkX).

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to                                    | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | To understand various data collection techniques and their importance.                  | 1                | 70 %                                  | 65%                                  |
| Outcome 2 | To apply data pre-processing techniques   | 3                | 70 %                                  | 65%                                  |
| Outcome 3 | Manage huge amount of data and to apply classification algorithms.                      | 4                | 70 %                                  | 65%                                  |
| Outcome 4 | Manage huge amount of data and to visualize their diversity and importance.             | 5                | 70 %                                  | 65%                                  |
| Outcome 5 | Able to draw graphs in different formats and transform one data format to other format. | 2                | 70 %                                  | 65%                                  |

# List of practical experiments

| SL.No | Lab assignment title  | Contact Hours | CLOs  | Ref.Used |
|-------|---|---------------|-------|----------|
| 1     | Python basics, creating and manipulating a List, and dictionaries.  | 2             | 1,2   | 1        |
| 2     | Basic exercises on Python Packages such as Numpy, SciPy, Pandas,<br>Scikit-learn, Matplotlib, NetworkX  | 2             | 5     | 2        |
| 3     | Basic exercises on IPython Notebook   | 2             | 2     | 2        |
| 4     | Write a program using Datasets and code used in the book  | 2             | 2,3   | 2        |
| 5     | Creating a Data Frame and Matrix-like Operations on a Data Frame<br>from CSV or text files and Applying functions to Data Frames                  | 2             | 2,3,4 | 2        |
| 6     | Write a program to implement how to structurally load, manipulate, preprocess, and polish data with pandas and NumPy                              | 2             | 2     | 2        |
| 7     | Write a program to implement working with categorical and textual data  | 2             | 2,3   | 1        |
| 8     | Write a program to implement creating NumPy arrays,<br>Unidimensional and Multidimensional arrays   | 2             | 2     | 1        |
| 9     | Write a program to demonstrate the Introducing EDA (Exploratory Data Analysis), Feature creation  | 2             | 2     | 2        |
| 10    | Write a program to demonstrate the different Scoring functions (binary, multilabel classification)  | 2             | 2     | 2        |
| 11    | Write a program to implement the building custom scoring functions  | 2             | 2,4   | 2        |
| 12    | Write a program to demonstrate the different feature selection methods  | 2             | 2     | 1,2      |
| 13    | Implement different data structures in R  | 2             | 1,2   | 1,2      |
| 14    | Simple Linear Regression – Fitting, Evaluation and Visualization<br>and Multiple Linear Regression, Lasso and Ridge Regression in<br>Python and R | 2             | 3,5   | 1,2      |
| 15    | Project Discussion and presentation   | 2             | 1-5   | 1,2      |
|       | Total contact hours   |               | 30    |          |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. Understand the importance of big data and its concept.
- 2. To learn big data processing concepts.
- 3. To learn and implement big data analytics techniques.
- 4. To learn and implement Hadoop eco system.
- 5. To learn and implement NoSQL database.

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to                  | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | To understand big data and it's importance.                           | 1                | 70 %                                  | 65%                                  |
| Outcome 2 | To apply big data processing techniques                               | 3                | 70 %                                  | 65%                                  |
| Outcome 3 | Manage huge amount of data by applying big data analytics techniques. | 4                | 70 %                                  | 65%                                  |
| Outcome 4 | Manage huge amount of data using Hadoop eco system.                   | 5                | 70 %                                  | 65%                                  |
| Outcome 5 | Able to manage and analyse big data using NoSql.                      | 2                | 70 %                                  | 65%                                  |

# **Course Unitization Plan Theory**

| Unit No. | Unit Name  | Required<br>Contact Hours | CLOs<br>Addressed | References<br>Used |
|----------|--|---------------------------|-------------------|--------------------|
| Unit I   | Introduction to Big Data   | 8                         |                   |                    |
|          | Navigating Big Data: An Overview of Concepts and Terminology   | 1                         | 1                 | 1,3                |
|          | troduction to Advanced Data Processing Frameworks  | 2                         | 1                 | 1,3                |
|          | Mastering Big Data Analytics: Quantitative   | 1                         | 1                 | 1,3                |
|          | Qualitative  | 2                         | 1                 | 1,3                |
|          | Machine Learning Techniques.   | 2                         | 1                 | 1,3                |
| Unit II  | Advanced Spark Features  | 10                        |                   |                    |
|          | Advanced Spark Features: Introduction to Spark Streaming   | 2                         | 2                 | 1,3                |
|          | Building and managing streaming applications   | 1                         | 2                 | 1,3                |
|          | Windowing and stateful operations  | 1                         | 2                 | 1,3                |
|          | Spark MLlib for Machine Learning: Overview of MLlib, Building  | 1                         | 2                 | 1,3                |
|          | and training machine learning models   | 1                         | 2                 | 1,5                |
|          | Evaluation and tuning  | 1                         | 2                 | 1,3                |
|          | Spark GraphX for Graph Processing: Introduction to GraphX  | 1                         | 2                 | 1,3                |
|          | Graph processing operations and algorithms   | 1                         | 2                 | 1,3                |
|          | Use cases  | 1                         | 2                 | 1,3                |
|          | Applications   | 1                         | 2                 | 1,3                |
| Unit III | NoSQL Databases  | 9                         |                   |                    |
|          | Introduction to NoSQL Databases: Comparing SQL vs. NoSQL<br>and Exploring Key Types—Key-Value Stores   | 3                         | 2                 | 1,2                |
|          | Document Stores, Wide-Column Stores, and Graph Stores, Data<br>Lakes and Data Warehouses: Differences Between Data Lakes and<br>Data Warehouses  | 2                         | 2                 | 1,2                |
|          | Architecture and use cases, Data storage and processing models,<br>Implementing and Managing a Data Lake, Using AWS S3 and<br>Azure Data Lake, Data ingestion and management strategies                            | 1                         | 2                 |                    |
|          | Data Warehouse Solutions, Overview of data warehousing,<br>Amazon Redshift: Architecture and optimization  | 2                         | 2                 | 1,2                |
|          | Google BigQuery: Serverless data warehousing   | 1                         | 2                 | 1,2                |
| Unit IV  | ETL Techniques   | 10                        |                   |                    |
|          | ata Integration and ETL Processes.   | 2                         | 3                 | 1,3                |
|          | Advanced ETL Techniques.   | 2                         | 3                 | 1,3                |
|          | ETL architecture and workflow, Challenges and best practices   | 2                         | 3                 | 1,3                |
|          | Data cleansing and enrichment techniques.  | 2                         | 3                 | 1,3                |
|          | Data Pipeline Orchestration, Tools: Apache NiFi, Talend,<br>Informatica.   | 2                         | 3                 | 1,3                |
| Unit V   | Distributed Machine Learning   | 8                         |                   |                    |
|          | Machine Learning at Scale, Distributed Machine Learning with<br>Spark MLlib and H2O.ai, Overview of distributed ML libraries,  | 2                         | 4                 | 1,3                |
|          | Model training and scalabilityDay 3-4: Model Selection and Tuning for Big Data,Hyperparameter tuning, Cross-validation and model evaluation,Association Rule Mining, Clustering and Classification                 | 3                         | 4                 | 1,3                |
|          | Clustering algorithms: K-means, DBSCAN, Classification<br>algorithms: Decision Trees, Random Forest, SVM, Real-Time<br>Data Visualization, Using Tools like Grafana and Kibana,<br>Overview of Grafana and Kibana. | 3                         | 4                 | 1,3                |

# List of practical experiments

| Session | Description of Experiment   | Required<br>Contact Hours | CLOs<br>Addressed | References<br>Used |
|---------|---|---------------------------|-------------------|--------------------|
| 1.      | Apache Spark installation   | 4                         | 4                 | 1,2,3              |
| 2.      | Run Spark applications such as word count and matrix multiplication | 2                         | 2                 | 1,4                |
| 3.      | Programs based on DataFrame API                                     | 4                         | 2                 | 1,3                |
| 4.      | Programs based on Spark MLlib - Machine learning library            | 4                         | 2                 | 1,3                |
| 5.      | Design an E-commerce product catalog system using MongoDB.          | 4                         | 2                 | 1,3                |
| 6.      | CURD operations in Cassandra.                                       | 4                         | 3                 | 1,3                |
| 7.      | Working with HBase commands.  | 4                         | 4                 | 4                  |
| 8.      | Create multiple nodes and build relationships using Neo4j CQL.      | 4                         | 1,2               | 1,3                |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To understand the importance of algorithm analysis.
- 2. To learn algorithmic approach and problem-solving techniques.
- 3. To learn which problem-solving technique to apply for a given problem.
- 4. To learn to solve complex and NP class problems.
- 5. To learn to implement and analyse the complexity of all problem-solving techniques.

#### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to                       | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | To understand the importance of algorithms analysis.                       | 1                | 70 %                                  | 65%                                  |
| Outcome 2 | To learn algorithmic approaches and problem-solving techniques.            | 2                | 70 %                                  | 65%                                  |
| Outcome 3 | To learn which problem-solving techniques to apply for a given problem.    | 3                | 70 %                                  | 65%                                  |
| Outcome 4 | To learn to solve complex and NP class problems.                           | 3                | 65 %                                  | 60%                                  |
| Outcome 5 | To learn to implement and analyse the complexity of many complex problems. | 3                | 70 %                                  | 65%                                  |

# Lab Utilization Plan

| SI No. | Experiment   | Required<br>Contact Hours | CLOs<br>Addressed | References Used |
|--------|--|---------------------------|-------------------|-----------------|
| 1      | Implement 8 queens problem. Analyse how the number of possibilities decrease with each constraint.   | 2                         | 4                 | 1, 2            |
| 2      | Implement generate and test method for 16-<br>puzzle problem.<br>Propose a heuristic function and use it in the<br>program.  | 2                         | 4                 | 1, 2            |
| 3      | Write programs for (a) Fractional knapsack and (b) 0/1 Knapsack problems. Explain how the heuristic can work in (a) and not in (b).  | 2                         | 4                 | 1, 2            |
| 4      | Implement Towers of Hanoi problem by<br>recursive and non-recursive methods. Discuss<br>the complexity in both cases.<br>Implement a Hash table as a set of linked lists.<br>Discuss advantages. | 2                         | 4                 | 1               |
| 5      | Write a program to find Minimum Spanning<br>tree of a given graph.Mention the possible<br>application.   | 2                         | 4                 | 1,2             |
| 6      | Write a program to find All- to- All shortest<br>paths of a given graph.Discuss the complexity<br>and applications   | 2                         | 4                 | 1,2             |
| 7      | Implement any algorithm for Ford-Fulkerson<br>method to solve the Maximum flow problem.<br>Discuss the applications.   | 2                         | 4                 | 1,2             |
| 8      | Write a program to implement the Graham's algorithm to find Convex Hull of a given set of points.  | 2                         | 4                 | 1,2             |
| 9      | Implement Floyd-Warshall's algorithm to get<br>transitive closure of a Graph (Reachability<br>matrix).Implement Brute-force algorithm for<br>pattern matching.                                   | 2                         | 4                 | 1,2             |
| 10     | Implement Boyer-More algorithm for Pattern matching.Implement KMP algorithm for Pattern matching.  | 2                         | 4                 | 1,2             |
| 11     | Implement Travelling Salesman problem which<br>can give accurate answer. Test it on a graph of at<br>least 6 cities. Discuss complexity.   | 2                         | 4                 | 1,2             |
| 12     | Use the MST program to get an approximate solution for Travelling Salesman problem   | 2                         | 4                 | 1,2             |
| 13     | Create a pack of playing cards ( 4 suits (colors) & each suit will have 2,3,10, Jack , Queen, King, Ace). Display the cards. Simulate shuffling of the pack and display the shuffled             | 2                         | 4                 | 2               |

|    | cards. Distribute them among 4 players in a<br>Round robin fashion and display the cards with<br>each player. Give some value for each color and<br>card and find the total values of the cards with<br>each player.  |    |   |   |
|----|---|----|---|---|
| 14 | Simulate the following scenario assuming that<br>the time between calls is random. There are two<br>technical support people: Able and Baker. Able<br>is more experienced and can provide service<br>faster than Baker. Times are usually a continuous<br>measure, but this time-based example is made<br>discrete for ease of explanation. The simulation<br>proceeds in a complex manner because of two<br>servers. When both are free Able gets the call.<br>Assume service distribution other than given in<br>your slides. | 2  | 4 | 2 |
| 15 | Implement approximate set cover and Vertex cover algorithms   | 2  | 4 | 2 |
|    | Total Lab Hrs   | 30 |   |   |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. Introduce Machine Learning and various task involved in the pipeline of machine learning application development.
- 2. Understand a wide variety of regression, classification and clustering algorithms.
- 3. Apply the algorithms to a real-world problem, optimize the models learned and report on the expected accuracy that can be achieved by applying the models.
- 4. Learn the rapid advances in Machine Learning and able to understand the research articles

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to  | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Demonstrate the phases of machine learning application development.   | 2                | 75%                                   | 75%                                  |
| Outcome 2 | Describe the learning algorithms.   | 2                | 75%                                   | 70%                                  |
| Outcome 3 | Explain the techniques to deal with data and its dimension.   | 2                | 70%                                   | 65%                                  |

| 1.         | Basic exercises on Python Machine Learning Packages such as Numpy, Pandas and matplotlib   | 4                         | 1                 | 1,2                |
| 2.         | Given a dataset. Write a program to compute the Covariance,<br>Correlation between a pair of attributes. Extend the program to<br>compute the Covariance Matrix and Correlation Matrix.                                | 2                         | 2                 | 2                  |
| 3.         | Given a set of sample points in N dimensional feature space. Write<br>a program to fit the points with a hyper plane using Linear<br>Regression. Calculate sum of residual error.                                      | 2                         | 2                 | 4                  |
| 4.         | Write a program that provides option to compute different distance<br>measures between two points in the N dimensional feature space.<br>Consider some sample datasets for computing distances among<br>sample points. | 2                         | 2                 | 4                  |
| 5.         | Write a program to demonstrate the working of the decision tree<br>based ID3 algorithm. Use an appropriate data set for building the<br>decision tree and apply this knowledge to classify a new sample.               | 2                         | 3                 | 4                  |
| 6.         | Write a program to implement k-Nearest Neighbour algorithm to<br>classify the iris data set. Print both correct and wrong predictions.<br>Python ML library classes can be used for this problem.                      | 2                         | 3                 | 4                  |
| 7.         | Write a program to implement feature reduction using Principle<br>Component Analysis   | 2                         | 3                 | 4                  |
| 8.         | Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.                               | 2                         | 3                 | 4                  |
| 9.         | Given a dataset for classification task. Write a program to<br>implement Support Vector Machine and estimate it test<br>performance.   | 2                         | 3                 | 3                  |
| 10.        | Write a program to implement perceptron for different learning task  | 2                         | 4                 | 4                  |
| 11.        | Write programs to implement ADALINE and MADALINE for given learning task.  | 2                         | 4                 | 2                  |
| 12.        | Build an Artificial Neural Network by implementing the Back<br>propagation algorithm and test the same using appropriate data<br>sets.   | 4                         | 4                 | 2                  |
| 13.        | Write a program to implement K means clustering algorithm.<br>Select your own dataset to test the program. Demonstrate the<br>nature of output with varying value of K.  | 2                         | 3                 | 2                  |
|            | Total contact hours  |                           | 30                |                    |

### Learning Assessment

### Course Objectives / Course Learning Rationales (CLRs)

- 1. Understand the basics of Python programming.
- 2. To learn I/O Operations, Basic image processing using Python.
- 3. To learn the basic data analysis using Python.
- 4. To learn Extending and Embedding Python.
- 5. To learn and implement project.

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to            | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | To understand the basics of Python programming.                 | 1                | 70 %                                  | 65%                                  |
| Outcome 2 | To apply /O Operations and basic image processing techniques.   | 3                | 70 %                                  | 65%                                  |
| Outcome 3 | Manage huge amount of data by applying data science techniques. | 4                | 70 %                                  | 65%                                  |
| Outcome 4 | Manage Embedding Python.  | 5                | 70 %                                  | 65%                                  |
| Outcome 5 | Able to manage and analyse data using data analytics.           | 2                | 70 %                                  | 65%                                  |

#### Course Objectives / Course Learning Rationales (CLRs)

- 1. Encourage initiatives that address local needs, foster self-sufficiency, and promote environmental sustainability within the community.
- 2. Equip participants with a deeper understanding of social issues and a sense of responsibility towards marginalized communities.
- 3. Inspire active participation in community service programs and foster a culture of giving back among individuals and organizations.
- 4. Develop and implement programs that contribute to skill development, economic empowerment, and equal opportunities for underprivileged sections of society.

#### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to                                      | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Develop effective strategies for identifying and addressing community needs.              | 3                | 80%                                   | 80%                                  |
| Outcome 2 | Demonstrate empathy and cultural sensitivity when engaging with diverse community groups. | 4                | 80%                                   | 75%                                  |
| Outcome 3 | Implement sustainable solutions and evaluate their impact on social well-being.           | 5                | 90%                                   | 85%                                  |
| Outcome 4 | Collaborate effectively within teams to design and lead community service projects.       | 6                | 90%                                   | 80%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To develop a foundation in innovation and entrepreneurship among the students.
- 2. To enhance analytical skills of students for practical application of their ideas.
- 3. To make students proficient in designing solutions.
- 4. To introduce students to different phases of entrepreneurship.

#### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to   | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Describe and classify the basic concepts of Innovation and<br>Entrepreneurship                   | 2                | 90%                                   | 80%                                  |
| Outcome 2 | Discuss the concept of Design Thinking and prototyping   | 2                | 80%                                   | 70%                                  |
| Outcome 3 | Apply design thinking to generate innovative ideas and strategize implementation plan            | 3                | 65%                                   | 60%                                  |
| Outcome 4 | Prepare a business plan by assessing customer segment, market validation and product development | 4                | 60%                                   | 60%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. Understand the importance of big data and its concept.
- 2. To learn big data processing concepts.
- 3. To learn and implement big data analytics techniques.
- 4. To learn and implement Hadoop eco system.
- 5. To learn and implement NoSql database.

#### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to                  | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | To understand big data and it's importance.                           | 1                | 70 %                                  | 65%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. Understand the fundamental concepts of ML/DL, tensor flow, and keras
- 2. Study of different activation functions and ANN.
- 3. Study and application of CNN, and RNN models
- 4. Application of different deep learning concepts

### ourse Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Illustrate the concepts of ML/DL                     | 1                | 70%                                   | 68%                                  |
| Outcome 2 | Design and implement CNN model                       | 2                | 70%                                   | 65%                                  |
| Outcome 3 | Design and implement RNN model                       | 2                | 70%                                   | 65%                                  |
| Outcome 4 | Apply deep learning models to given problems.        | 3                | 70%                                   | 60%                                  |

| Lab 1: To implement a Multilayer Perceptron (MLP) using<br>Keras with TensorFlow, and fine-tune neural network<br>hyperparameters for regression problem (house price<br>prediction). | 3                         | 1,2               | 1               |
| <b>Lab 2:</b> To implement a MLP using Keras with TensorFlow for classification problem (heart disease prediction).   | 3                         | 1,2,3             | 1               |
| Lab 3: To implement a Convolution Neural Network (CNN) for dog/cat classification problem using TensorFlow/Keras.   | 3                         | 2,3               | 1               |
| Lab 4: To implement a CNN for handwritten digit recognition.  | 2                         | 1,2,3             | 1               |
| Lab 5: To Implement a CNN for object detection in the given image.  | 3                         | 2,3               | 1               |
| Lab 6: To implement a Long Short-Term Memory (LSTM) for predicting time series data.  | 3                         | 3,4               |                 |
| Lab 7: To implement a Seq2Seq Model for Neural Machine Translation.   | 3                         | 3,4               | 1               |
| Lab 8: To implement a Recurrent Neural Network (RNN) for predicting time series data.   | 3                         | 3,4               | 1               |
| Lab 9: To implement an Encoder-Decoder Recurrent neural network model for Neural Machine Translation.   | 3                         | 2,3,4             | 1               |
| Lab 10: Case Study 1: Object detection for Self-Driving<br>Cars   | 3                         | 1,2,3,4           | 1,2             |
| Lab 11: Case Study 2: Object detection for Healthcare images  | 3                         | 1,2,3,4           | 1,2             |
| Total   | 30                        |                   |                 |

## Learning Assessment

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To introduce the basic concepts of Data Warehouse and Data Mining techniques.
- 2. Examine the types of the data to be mined and apply pre-processing methods on raw data.
- 3. Discover interesting patterns, analyze supervised and unsupervised models, and estimate the accuracy of the algorithms.
- 4. Understand the implement recommendation system using fundamental mathematical and algorithmic ingredients.
- 5. Understand the use of data visualization tool.

#### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to  | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Identify methods to pre-process the real world data to make it suitable for various data mining algorithms.   | 2                | 75%                                   | 70%                                  |
| Outcome 2 | Implement models to measure interesting patterns from different kinds of databases.   | 5                | 75%                                   | 70%                                  |
| Outcome 3 | Design, develop and model various techniques such as clustering,<br>classification, association finding, feature selection and visualization<br>to real world data for public health and safety, and the cultural,<br>societal, and environmental considerations. | 3                | 70%                                   | 60%                                  |
| Outcome 4 | Acquire real world data from different sources to build<br>Recommendation Systems as well as represent knowledge using<br>Visualization tools.  | 4                | 70%                                   | 60%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To understand the fundamentals of production and operations management.
- 2. To learn about capacity planning, plant layout, scheduling and sequencing
- 3. To learn about operation management, work-study, time study
- 4. To understand about Inventory control, supply chain management

#### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to   | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Define and explain the basic concepts and principles of production<br>and operations management (POM), | 1                | 80%                                   | 75%                                  |
| Outcome 2 | Develop proficiency in capacity planning, plant layout etc.  | 2                | 70%                                   | 75%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To widen the understanding of doing research.
- 2. To facilitate the ideation of a thought.
- 3. To devise and plan ways to execute an idea.
- 4. To learn how to avoid plagiarism and publish one's contribution in the research community.

#### ourse Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to  | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Conceptualize an idea                                 | 5                | 75%                                   | 70%                                  |
| Outcome 2 | Devise a plan to do the literature survey on the idea | 5                | 75%                                   | 70%                                  |
| Outcome 3 | Formulate the mathematical model for the problem.     | 4                | 75%                                   | 70%                                  |
| Outcome 4 | Assess the relevance and societal impact of the work  | 5                | 70%                                   | 65%                                  |
| Outcome 5 | Write a technical paper and report the findings.      | 3                | 75%                                   | 70%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To enable students to apply theoretical concepts learned in the classroom to real-world industrial scenarios.
- 2. To develop and enhance students' professional and technical skills through direct involvement in industry-specific projects
- 3. To expose students to industry standards, practices, and workplace culture, giving them an understanding of the professional environment in their chosen field.
- 4. To provide students with networking opportunities and enhance their career development prospects by building connections with industry professionals.

#### ourse Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to   | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Demonstrate the ability to apply theoretical knowledge and concepts<br>from their academic coursework to real-world industry challenges<br>and projects.     | 1                | 80%                                   | 75%                                  |
| Outcome 2 | Exhibit enhanced professional skills, including effective<br>communication, teamwork, and project management, gained through<br>their internship experience. | 2                | 70%                                   | 75%                                  |
| Outcome 3 | Demonstrate a comprehensive understanding of industry standards, practices   | 3                | 80%                                   | 70%                                  |
| Outcome 4 | Develop a professional network and gain insights into career opportunities and pathways within their industry.   | 2                | 80%                                   | 75%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To widen the understanding of doing research.
- 2. To facilitate the ideation of a thought.
- 3. To devise and plan ways to execute an idea.
- 4. To learn how to avoid plagiarism and publish one's contribution in the research community.

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to             | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Refine the conceptualized idea from Phase 1                      | 5                | 75%                                   | 70%                                  |
| Outcome 2 | Implement the mathematical model formulated in Phase 1.          | 5                | 75%                                   | 70%                                  |
| Outcome 3 | Conduct the simulation analysis and extract the results          | 5                | 75%                                   | 70%                                  |
| Outcome 4 | Validate the results obtained with Literature survey.            | 5                | 70%                                   | 65%                                  |
| Outcome 5 | Publish and present finding in reputed journals and conferences. | 3                | 75%                                   | 70%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To develop a foundational understanding of Expert Systems.
- 2. To develop problem-solving skills and effective reasoning using Knowledge Engineering.
- 3. To learn and apply various Expert Systems.
- 4. To apply Knowledge Engineering and Expert Systems concepts to solve real-world problems in diverse domains.

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to                    | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|---|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Identify the Knowledge Engineering Approaches                           | 2                | 70%                                   | 65%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To provide an overview of Information Retrieval.
- 2. To introduce students to insights into several Information retrieval topics such as The boolean retrieval model, Vector space model, Latent semantic indexing, XML and Image retrieval model.
- 3. To provide comprehensive details about various Evaluation methods.
- 4. To provide implementation insight about the topics covered in the course.

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to   | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Students will be able to understand different Information retrieval models.  | 2                | 70%                                   | 70%                                  |
| Outcome 2 | Students will be able to design and implement different data<br>structures, such as an index, to allow efficient access to the<br>information in large bodies of text. | 3                | 70%                                   | 65%                                  |
| Outcome 3 | Students will be able to understand evaluation methods for different kinds of information retrieval models.  | 4                | 70%                                   | 70%                                  |
| Outcome 4 | Students will be able to apply, evaluate and analyze classification<br>and clustering techniques in information retrieval.   | 4                | 70%                                   | 65%                                  |
| Outcome 5 | Students will be able to develop a small-scale IR system from scratch.   | 5                | 70%                                   | 60%                                  |

### Course Objectives / Course Learning Rationales (CLRs)

- 1. To develop a foundational understanding of AI principles and techniques.
- 2. To develop problem-solving skills and effective reasoning using AI techniques.
- 3. To learn and apply various neural network techniques in AI systems.
- 4. Applying AI and neural network concepts to solve real-world problems in diverse domains.

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to                                     | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Identify the Agents and Environments in AI.  | 1                | 70%                                   | 65%                                  |
| Outcome 2 | Discuss the evaluation functions for optimal decision-making in multiplayer games.       | 2                | 70%                                   | 65%                                  |
| Outcome 3 | Formalise the propositional and first-order logic and use resolution in problem-solving. | 4                | 70%                                   | 65%                                  |

## Course Objectives / Course Learning Rationales (CLRs)

- 1. Understand the fundamental theory and concepts of neural networks, Identify different neural network architectures, algorithms, applications and their limitations.
- 2. Understand appropriate learning rules for each of the architectures and learn several neural network paradigms and its applications.
- 3. Comprehend the fuzzy logic and the concept of fuzziness involved in various systems and fuzzy set theory.
- 4. Understand the concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic.
- 5. Understand the Genetic Algorithm and able to identify the application area.
- 6. Understand soft computing techniques and their role in problem solving. Reveal different applications of these models to solve engineering and other problems.

### Course Outcomes / Course Learning Outcomes (CLOs)

|           | At the end of the course the learner will be able to   | Bloom's<br>Level | Expected<br>Proficiency<br>Percentage | Expected<br>Attainment<br>Percentage |
|-----------|--|------------------|---------------------------------------|--------------------------------------|
| Outcome 1 | Demonstrate the Soft Computing and Artificial Neural Networks model  | 3                | 90%                                   | 75%                                  |
